

Codonics Horizon Operating Software

Release Notes

Version 3.0.0 Release Notes

Summary

Horizon[®] 3.0.0 software provides support for new imager hardware that includes a new motherboard and a rear USB port for software updates.

Products Affected

New imager hardware can be identified by imager serial number prefix 53C, 54C, or 55C. Please contact your Codonics representative for further information.

The Imager Software Version can be determined using the Control Panel by viewing the Imager Info screen from the Utilities menu.

NOTE: Horizon Imagers with Version 3.0.0 software cannot be downgraded to any previous version.

New Features

- ◆ **Support for new motherboard and software on USB flash drive.** 3.0.0 software for new hardware is now on USB flash drive.

Product Improvements

- ◆ **Support for front panel Zip drive has been replaced with a rear panel USB port for software updates.**

Known Common Issues

- ◆ **Color Linear Ramp test print results in a blank page.** Imager prints a blank page when the user attempts to print the Color Linear Ramp test print.

Known Uncommon Issues

- ◆ **Captions not supported with DICOM landscape printing.**
- ◆ **Unsupported DICOM image compression results in an "out of memory" error at the host.**
- ◆ **PostScript cropping or padding.** Images pre-scaled to the full page size may experience slight cropping or padding due to rounding effects from converting between points and pixels.
- ◆ **SA-1000/2000 Frame Grabber incompatibility.** Version 2.x.x and 3.x.x software has an incompatibility with the SA-1000/2000 Analog to Digital Converter that affects the transmission time. The images are transmitted successfully, but much more slowly than with 1.x.x software.
- ◆ **Illumination and Reflected Light values are incorrect on the Imager Status test print.** The values printed on the Imager Status print page are 100 times the actual settings. The values displayed on the Control Panel are correct.
- ◆ **Calibration print jobs do not purge.** Removing Print Length Calibration or Film Calibration print jobs from the queue will occasionally result in a Control Panel message that there are sheets queued. Power-cycling the Imager will clear these jobs.

Technical Support

If problems occur during software installation, contact Codonics Technical Support between the hours of 8:30AM and 5:30PM EST (weekends and U.S. holidays excluded).
